### 11.1.9 CMR-EFFECTS (CARCINOGENICITY, MUTAGENICITY AND REPRODUCTIVE TOXICITY)

This product contains no ingredients with known carcinogenicity, mutagenicity or reproductive toxicity effects.

### 11.1.10 ADDITIONAL ADVICE ON TOXICOLOGY

The product was classified in toxicological terms on the basis of the results of the calculation procedure outlined within General Directive on Preparations (1999/45/EC). There are no data from toxicological tests regarding the entire product. The values for acute toxicity, irritation and sensitization on skin and mucosa and for the mutagenic potential of the product were estimated based on available data on product ingredients. There is a lack of relevant data for some ingredients. According to the experience of the manufacturer, no dangers other than the ones declared on the label are to be expected.

## 12 ECOLOGICAL INFORMATION

### 12.1 TOXICITY

The release of the diluted ready-to-use solution of this product is not expected to have any ecotoxic effects. The concentrated solution can have prolonged and widespread toxic effects on aquatic and terrestrial organisms. The release of concentrated solution may negatively affect the function of sewage treatment plants. There is no data available from ecotoxicological tests regarding the entire product. The ecotoxicological risk has been estimated based on available data on product ingredients and concentrations, where available.

### 12.2 PERSISTENCE AND DEGRADABILITY

The product ingredients possess good biodegradation properties. The surfactants included in the product comply with the requirements for the biological decomposition of Regulation (EC) No. 648/2004 on detergents. Based on available data, the biodegradability in sewage treatment plants can be categorized as high. High product concentrations can affect the biodegradability potential of the activated sludge. Obtain the consent of the local authorities before discharging the concentrated solution to wastewater treatment plants.

#### BIODEGRADATION OF RELEVANT SUBSTANCES IN THE MIXTURE

SUBSTANCE	CAS NUMBER	BIODEGRADATION
A-[2-(DIDECYLMETHYLAMMONIO)ETHYL]-W-HYDROXY POLY(OXY-1,2-ETHANEDIYL)PROPANOAT	94667-33-1	CA. 95% (METHOD OECD 303 A); 80% METHOD OECD 302 B); 34 % (METHOD OECD 301 B).
N-(3-AMINOPROPYL)-N-DODECYLPROPANE-1,3-DIAMINE	2372-82-9	>70% (METHOD OECD 301 D).
ISOTRIDECANOL, ETHOXYLATED	69011-36-5	>70% (28D, METHOD OECD 301 A).

### 12.3 BIOACCUMULATIVE POTENTIAL

Based on available data, no product ingredient is expected to exhibit bioaccumulative potential.

### 12.4 MOBILITY IN SOIL

The product is not expected to be mobile over long distances because most of the product ingredients possess good biodegradability. The remaining ingredients (e.g. mineral salts) are absorbed into the soil without negative ecological effects. This product reduces the surface tension of water. Because of possible aquatic toxicity, speedy decontamination measures must be taken if there is a danger of large quantities entering the ground water or water systems.
